Q A L A

Universal Solution Management OS

Business Plan · 2025 – 2030

Field	Detail
Document	Comprehensive Business Plan — Investor & Board Edition
Version	v1.0 — March 2025
Stage	Series A Raise
Target Raise	$28,000,000 USD
Valuation Pre-Money	$85,000,000 USD
Use of Funds	Product, GTM Scale, International Expansion
Headquarters	San Francisco, CA (offices: London, Singapore)
Status	Confidential — Not for Distribution without Written Consent
Prepared By	Qala Executive Team
Contact	invest@qala.io

This document contains forward-looking statements and projections. Past performance does not guarantee future results.

1 Executive Summary

Qala is the world's first Universal Solution Management Operating System — a single governed platform for every type of solution across every industry. We eliminate the proliferation of siloed lifecycle tools that costs enterprises an estimated $2.1 trillion in operational inefficiency annually.

1.1 The Opportunity

Every organisation manages solutions — software, pharmaceutical formulations, financial instruments, agricultural protocols, legal products, tax rule sets, managed services, and more. Today each domain uses a different tool ecosystem that does not interoperate. Governance, compliance, change control, and audit trails are fragmented. Qala unifies the entire lifecycle on one governed, AI-augmented platform with the same rigour for a drug formulation as for a software deployment.

1.2 Key Metrics at a Glance

$2.1T	$28M	312%	$1.4M
Addressable Market	**Series A Target**	**NRR (Pilot Cohort)**	**ARR (Seed Cohort)**
Global enterprise lifecycle ops TAM	18-month runway to ARR $12M	Net Revenue Retention	12-mo post-launch

14	$485K	9 mo	<6 mo
Domains Served	**ACV Enterprise Tier**	**Avg Sales Cycle**	**Time-to-Value**
Across 6 industries	Average Contract Value	Enterprise pilot → close	Pilot to production

1.3 Investment Highlights

Why Qala Wins

FIRST-MOVER: No direct competitor serves all solution types on one governed platform.

NETWORK EFFECTS: Every additional domain deepens the data moat. Cross-domain AI improves with each customer.

REGULATORY TAILWIND: DORA, EU AI Act, FDA DSCSA, SOX, and MiFID II all mandate governed lifecycle evidence. Qala makes compliance a byproduct of normal operations.

EXPANSION REVENUE: Customers start with one domain and expand. NRR of 312% on pilot cohort proves this thesis.

ENTERPRISE LOCK-IN: Once Qala becomes the system of record for lifecycle governance, replacement cost is prohibitive.

1.4 The Ask

Qala is raising $28,000,000 in Series A funding to accelerate product development across the full 14-domain platform, scale the go-to-market motion proven in the pilot cohort, expand internationally, and hire the enterprise sales and customer success team required to capture the pipeline of 47 qualified enterprise opportunities totalling $23.4 million in potential ARR.

Use of Funds	Amount	% of Raise	12-mo Output
Product & Engineering	$11.2M	40%	Full 14-domain platform GA; mobile; AI Agent v2
Sales & Go-to-Market	$7.0M	25%	25 enterprise logos; 3 channel partnerships
International Expansion	$4.2M	15%	UK office; Singapore hub; 6 enterprise customers
Customer Success & Ops	$2.8M	10%	NRR > 130%; < 5% gross churn
G&A	$1.4M	5%	Finance, Legal, HR infrastructure for scale
Reserve	$1.4M	5%	Strategic optionality, M&A exploration
Total	$28.0M	100%	ARR target: $12M by end of Series A period

2 Company Overview

2.1 Mission

Mission Statement

To make governed solution lifecycle management universally accessible — so every organisation, regardless of domain, can build, change, release, and retire solutions with the same rigour, traceability, and intelligence as the world's most sophisticated regulated enterprises.

2.2 What Qala Does

Qala is an Operating System for Solutions. Just as an OS abstracts hardware so any application can run, Qala abstracts the universal structure of any solution so any organisation can govern it through a structured lifecycle. The platform provides:

- Universal Solution Model — one data structure representing any solution type, with domain extensions loaded from Domain Packs.
- Solution Development Environments (SDEs) — governed, versioned workspaces adapted per domain: CI/CD environments for software, formulation workbenches for CPG, research workbenches for finance.
- Change Control Registry — structured, auditable change records with risk scoring, routing, approval chains, and compliance evidence generation.
- Release & Distribution Engine — configurable quality-gated release pipelines with attestation and distribution for any solution type.
- AI Agent — cross-domain intelligence that monitors solution health, predicts failures, surfaces recommendations, and drafts CCR documentation.
- Compliance Evidence Vault — auto-generated evidence for SOC 2, ISO 27001, GxP, FDA 21 CFR Part 11, SOX, MiFID II, and custom frameworks.

2.3 Founding Story

Qala was founded in 2022 by four founders who experienced the same pain from different angles. CEO Priya Sundaram led a pharmaceutical digitalisation programme requiring seven vendor platforms for a single drug lifecycle. CTO Marcus Okafor spent a decade building DevOps toolchains and watched financial and legal teams struggle to apply the same discipline to non-software assets. CPO Elena Vasquez, a compliance officer, spent 60% of her time manually assembling evidence from disconnected systems. CFO David Park had watched two SaaS companies stall because regulatory compliance became a growth inhibitor.

Together they recognised that the problem was not the lack of good tools — it was the lack of a universal operating system applying the same governance model to every solution type. Qala was incorporated in Delaware in January 2023, launched private beta in Q3 2024 with five design partners across three industries, and reached $1.4M ARR by Q1 2025.

2.4 Leadership Team

Name	Title	Background
Priya Sundaram	CEO & Co-Founder	Former VP Digital, AstraZeneca; MBA Harvard; led $400M pharma digitalisation across 14 countries.
Marcus Okafor	CTO & Co-Founder	Former Principal Engineer, Stripe; CS PhD Stanford; built distributed systems for 10M+ concurrent users.
Elena Vasquez	CPO & Co-Founder	Former Chief Compliance Officer, Barclays Capital; designed MiFID II architecture for 3,000-person trading operation.
David Park	CFO & Co-Founder	Former CFO at two SaaS companies (1 IPO, 1 acquisition); CPA; MBA Wharton.
James Whitfield	VP Engineering	Former Engineering Director, HashiCorp; 12 years enterprise developer tooling.
Amara Diallo	VP Sales	Former Enterprise Sales Director, ServiceNow; $120M ARR new business over 7 years.
Keiko Tanaka	VP Customer Success	Former VP CS, Veeva Systems; NRR track record of 130%+ across enterprise segment.

2.5 Current Investors

Investor	Type	Round	Amount	Notes
Andreessen Horowitz (a16z)	Institutional VC	Seed	$6.0M	Led seed. Partner: Martin Casado.
Unusual Ventures	Institutional VC	Seed	$3.0M	Enterprise SaaS focus.
Founders Fund (angel)	Angel	Pre-seed	$1.5M	Individual check via scout programme.
Operator Angels (6)	Angel	Pre-seed	$1.2M	C-suite execs from Veeva, ServiceNow, Palantir.

3 Problem & Solution

3.1 The Problem: Tool Sprawl at Enterprise Scale

The average enterprise uses 37 specialised tools to manage solution lifecycles across its operating domains. Each tool creates data silos. Compliance evidence is manually assembled before every audit. Change control is inconsistently applied. AI cannot reason across the full picture because no unified data model exists.

Domain	Current Tool Landscape	Core Pain
Software / Technology	Jira, GitHub, Jenkins, Confluence, ServiceNow + 8-12 more	Developer-centric. No governance parity for non-software assets.
Pharmaceutical / CPG	LIMS, MES, QMS, ERP, e-sign platform, stability system	Manual evidence assembly. GxP compliance gaps. Batch recall traceability.
Financial Services	Bloomberg, research platform, risk system, portfolio OMS	Model governance incomplete. No lifecycle audit trail for algorithms.
Agriculture	ERP, IoT platform, traceability system, crop management	Farm-to-consumer trace fragmented. Device firmware unversioned.
Legal & Tax	CLM, document management, tax engine, billing platform	Version control manual. Legislative update management ad hoc.
Research / Academia	Lab notebooks, data repository, publication system	Reproducibility crisis. No governed protocol lifecycle. IP gaps.

The Hidden Cost of Fragmentation

McKinsey estimates knowledge workers spend 19% of their time searching for information across disconnected systems. For a 10,000-person regulated enterprise this equals $180M in wasted productivity annually — before accounting for compliance failures ($14M average penalty per FDA warning letter), product recalls ($680M average), and audit remediation costs.

3.2 Three Root Causes

- No Universal Solution Model. Every existing tool is built for one solution type. No tool understands the universal pattern: solutions are versioned, changed, released, and retired — regardless of type.
- Governance as Afterthought. In most tool ecosystems, governance is a compliance module bolted onto functional workflows. This creates friction, encourages bypass, and produces evidence auditors distrust.
- AI Cannot Cross the Silo Boundary. AI tools embedded in individual platforms are limited to data within that platform. No AI today can see both software deployment failures and pharmaceutical batch failures and reason about a common upstream cause. Until Qala.

3.3 The Qala Solution

Root Cause	Qala Solution	Business Impact
No Universal Solution Model	Domain Pack architecture: universal core schema + domain-specific extensions. One model for all 40+ solution types.	Eliminates integration cost. Single system of record.
Governance as Afterthought	Governance-first architecture: every action is a governed event. Change control, quality gates, and attestation are the substrate.	Compliance evidence as byproduct. 94% reduction in audit prep time (design partner data).
AI Cannot Cross Silos	AI Agent operates on the unified data model. Cross-domain pattern detection. Recommendations informed by every solution type in the factory.	Novel risk detection impossible with siloed AI. 67% of AI-detected risks are cross-domain.
Domain Vocabulary Mismatch	Persona-adaptive UI: same platform speaks the language of every domain. Pharmacists see "Batch Release Pipeline"; developers see "CI/CD Pipeline."	Adoption across all domains. No training required for domain experts.

4 Market Analysis

4.1 Total Addressable Market

Qala competes in and creates a new category: Universal Solution Lifecycle Management. The TAM spans six converging markets already valued at over $2.1 trillion in total enterprise spend.

Market Segment	2024 Market Size	CAGR	Qala Relevance
Enterprise DevOps / ALM	$18.4B	14.2%	Software SDE, CI/CD pipeline, artefact registry
Quality Management Systems (QMS)	$14.7B	10.8%	CPG, pharma, medical device quality gates + CCR
Regulatory Information Mgmt	$8.9B	12.3%	FDA, EMA, MiFID II evidence generation + compliance vault
Enterprise Risk & Compliance	$56.3B	9.4%	Cross-domain CCR, risk scoring, audit trail
Research Data Management	$4.8B	16.1%	Research SDE, experiment lifecycle, dataset governance
Supply Chain Traceability	$22.1B	18.7%	CPG/agri traceability, GS1 EPCIS, distribution records
Financial Risk & Portfolio Mgmt	$34.2B	8.6%	Financial SDE, model governance, mandate lifecycle
AI / ML Ops Platforms	$4.1B	38.2%	AI Agent, cross-domain intelligence, model registry
Total Converging TAM	$163.5B	12.7%	All segments where Qala provides direct value

Serviceable Obtainable Market (SOM): $1.2B by 2028

SAM (Serviceable Addressable Market): $8.4B — global enterprises with 1,000+ employees in regulated industries across Qala's initial six target verticals.

SOM Year 1 (2025): $62M — focused on pharma/CPG and financial services, English-speaking markets.

SOM Year 3 (2027): $380M — with international expansion and 8 active domains.

SOM Year 5 (2029): $1.2B — full platform, 14 domains, global coverage.

4.2 Target Customer Profiles

Tier	Profile	Employees	ACV	Decision Maker	Sales Cycle
Tier 1 Enterprise	Global regulated enterprise: pharma, financial services, CPG, energy.	10,000+	$480K+	CIO / CDO / Chief Compliance Officer	9-14 months

Tier 2 Mid-Market	Mid-size regulated firm: specialty pharma, regional bank, large agri-co.	1,000-9,999	$95K-$320K	CTO / Head of Digital	4-8 months
Tier 3 Growth	High-growth scale-up needing compliance infrastructure from day one.	100-999	$18K-$75K	CTO / VP Engineering	1-3 months
Public Sector	Government labs, regulatory agencies, defence procurement.	500+	$120K+	CIO / Procurement Lead	12-24 months

4.3 Competitive Landscape

No direct competitor offers a universal solution lifecycle platform. Competition is domain-specific and fragmented:

Competitor	Domain	Strength	Qala Advantage
Veeva Systems	Life Sciences	Deep pharma workflow integrations; 40% market share in ClinTrial	Qala serves 14 domains vs. one. Cross-domain AI impossible for Veeva.
ServiceNow	IT / ITSM	Enterprise process automation; strong IT change management	ServiceNow does not govern solution lifecycles outside IT. No SDE. No domain packs.
GitHub + Actions	Software	Developer-loved CI/CD; dominant OSS community; massive adoption	GitHub governs only software assets. No CPG, Financial, Legal, Agri domains.
Benchling	Life Sciences R&D	Modern lab notebook; strong in biotech R&D	Benchling lacks release management, change control, and enterprise CCR routing.
LabVantage (LIMS)	Laboratory	Deep LIMS functionality for clinical and QC labs	LabVantage has no cross-domain capability and weak API-first architecture.
Palantir Foundry	Data / Analytics	Powerful data integration and ontology for complex enterprise data	Palantir is a data layer, not a lifecycle governance system. No solution model.
Internal Build	Any	Custom-fit; full data ownership	Estimated $8-15M build cost; 3-4 year timeline; ongoing maintenance burden.

Competitive Moat — The Virtuous Cycle

Each new enterprise customer adds domain telemetry that improves the AI Agent. Each new domain added makes the platform more valuable to existing customers (cross-domain governance). This creates a compounding network effect that point solutions cannot replicate and that grows stronger with every customer added.

4.4 Market Timing

Three converging forces make 2025 the optimal market entry moment:

- Regulatory pressure peak: DORA (effective Jan 2025), EU AI Act (2024-2026 rollout), FDA DSCSA (enforcement 2026), SEC climate disclosure rules, and MiFID III all require governed lifecycle evidence at an unprecedented level. Enterprises need a solution now.
- AI readiness: Enterprise buyers now accept AI-augmented workflows in regulated contexts. The AI-sceptic barrier of 2020-2022 has largely dissolved. Qala's AI Agent arrives at the right moment.
- Platform consolidation fatigue: After the SaaS proliferation of 2015-2023, enterprise IT leaders are actively seeking platform consolidation. Qala is the consolidation play for solution lifecycle management.

5 Product

5.1 Product Vision

Every solution — from a pharmaceutical compound to a tax rule set — governed, versioned, and intelligently managed. From creation to retirement. On one platform.

5.2 Platform Architecture

Qala is a multi-tenant SaaS platform built on three architectural layers:

Layer	Components	Description
Core Platform	Universal Solution Model, Lifecycle Engine, Event Bus, Audit Vault, Identity & RBAC	Domain-agnostic foundation. Handles all governance, state machines, event publishing, and immutable audit records.
Domain Packs	14 Domain Packs (software, CPG, pharma, financial, agricultural, legal, tax, research, service, tool, library, platform, capital, generic)	JSON schema extensions loaded per solution type. Define domain-specific fields, validation rules, quality gate types, distribution endpoints, and regulatory requirements.
Intelligence Layer	AI Agent, Recommendation Engine, Drift Monitor, Cross-Domain Pattern Detector, AI Compliance Drafter	Operates on the full unified data model. Trained on lifecycle telemetry across all customer tenants. Privacy-preserving federated architecture.

5.3 Key Product Differentiators

5.3.1 Domain Pack Architecture

Domain Packs are the foundation of Qala's extensibility. Each Domain Pack is a versioned JSON schema that extends the Universal Solution Model for a specific domain. When a new regulation is introduced, Qala publishes an updated Domain Pack that customers apply in minutes. Customers can also create Private Domain Packs for proprietary solution types.

5.3.2 AI Agent

The Qala AI Agent is not a chatbot. It is a persistent, context-aware intelligence layer that operates continuously across a customer's entire solution estate. It detects anomalies, predicts failures, recommends actions, auto-drafts CCR documentation, and provides regulatory context. As the first multi-domain AI in this space, it detects risks that are invisible to domain-specific tools.

5.3.3 Compliance Evidence Vault

Compliance evidence is generated as a byproduct of every governed action on the platform. When an auditor arrives, Qala generates a complete, time-stamped, cryptographically signed evidence package in minutes. Design partner data shows a 94% reduction in audit preparation time versus prior manual process.

5.3.4 Persona-Adaptive UI

The domain vocabulary layer adapts the entire UI to the user's domain without changing the underlying system. This eliminates the adoption barrier for non-technical domain experts who would otherwise need to learn software-centric terminology. No competing platform offers this capability.

5.4 Product Roadmap

Milestone	Target Date	Key Deliverables	ARR Impact
v1.0 GA (current)	Q1 2025	Software, CPG, Financial, Agricultural domains; Core platform; AI Agent v1	Base: $1.4M ARR
v1.5 — Domain Expansion	Q3 2025	Legal, Tax, Research, Managed Service domains; Mobile app; Offline-first for field ops	+$2.8M ARR
v2.0 — AI Agent v2	Q1 2026	Predictive release gate failure; auto-CCR from regulatory feed; cross-customer benchmarks	Drives NRR + $1.5M ARR
v2.5 — Marketplace	Q3 2026	Domain Pack marketplace; partner integrations (SAP, Oracle, Salesforce); ISV programme	+$3.2M ARR
v3.0 — Global	Q1 2027	Multi-language (12 languages); EU data residency GA; APAC data sovereignty; Arab localisation	Unlocks EU+APAC: +$4.1M ARR
v4.0 — Open Platform	Q4 2027	Public API; GraphQL; developer SDK; Qala Build for custom solution types; IPO readiness metrics	Platform ecosystem ARR

5.5 Current Traction

Metric	Value	Notes
ARR	$1.4M	As of Q1 2025. Seed cohort customers.
Design Partners	5	AstraZeneca (pharma), Barclays (financial), Unilever (CPG), Meridian Agri (agricultural), Linklaters LLP (legal).
Net Revenue Retention	312%	Pilot cohort expanded from 1 domain to 3.4 domains average within 12 months.
Gross Logo Retention	100%	Zero churn across all customers to date.
Avg ACV	$280K	Mix of Tier 1 and Tier 2.
Pipeline (qualified)	$23.4M ARR	47 qualified enterprise opportunities; 12 in late-stage negotiation.
NPS	72	Net Promoter Score across 140 platform users.
Time to Value	5.2 months	Average from contract signature to first production solution managed.
Domain Coverage	4 of 14	Software, CPG, Financial, Agricultural. 10 more in development.

Platform Uptime	99.97%	Last 12 months. Multi-region AWS. SOC 2 Type II audit in progress.

6 Go-to-Market Strategy

6.1 GTM Philosophy

Land on the strongest ROI domain. Prove governance value. Expand to every other domain the customer operates. Qala's growth model is expansion-led: the first sale is the smallest sale.

6.2 Target Segments & Entry Points

Primary Entry Vertical	Entry Pain Point	Expansion Path	ACV at Entry	ACV at Full Expand
Pharmaceutical / Life Sciences	GxP compliance burden; FDA 21 CFR Part 11 pressure	Software, Legal, Research, Supply Chain	$320K	$980K
Financial Services	Model governance gaps; MiFID II; algorithmic accountability	Software, Legal/Tax, Research, Risk	$420K	$1.2M
Consumer Goods (CPG)	Ingredient change control; product recall traceability; ESG	Software, Agricultural, Service, Legal	$180K	$720K
Enterprise Technology	DevOps governance; security compliance; SOC 2 burden	Financial, Legal, Research, Service	$95K	$380K
Agricultural Enterprise	Farm-to-fork traceability; IoT device governance; ESG	CPG, Supply Chain, Research, Environmental	$75K	$290K
Legal & Professional Services	Document lifecycle; matter governance; regulatory filing	Tax, Software, Research, Compliance	$110K	$460K

6.3 Sales Motion

6.3.1 Enterprise Motion (Tier 1 & 2)

Direct enterprise sales motion with a domain specialist-led approach. Each enterprise AE is paired with a domain solutions engineer who speaks the language of the target vertical. The sale is anchored on a paid 90-day pilot with one domain at one business unit, with contractual expansion rights. Our design partner experience shows that 100% of pilots have converted to multi-year enterprise agreements.

6.3.2 Product-Led Growth (Tier 3)

Self-serve onboarding for Growth tier. Free 30-day trial with Software domain only. Conversion to paid on the first solution type, then in-product expansion triggers (AI-generated recommendations to unlock additional domains). Internal champion programme incentivises organic spread within organisations.

6.3.3 Channel & Partnership

Three channel tracks in development: (1) Systems Integrators — Accenture, Deloitte, PwC Technology Consulting embedding Qala in regulated industry transformation programmes. (2) Technology Alliances — SAP, Oracle, and Salesforce bi-directional integrations creating mutual referral pipelines. (3) Domain Specialist Resellers — boutique regulatory consulting firms reselling Qala to their pharma and financial services clients.

6.4 Pricing Model

Tier	Target	Pricing Structure	Annual Range
Starter	Growth companies, single domain	Per-user, $150/user/month + $5K base. Up to 50 users. 1 domain.	$10K – $90K
Professional	Mid-market, 2-3 domains	Per-domain licensing + user tiers. $800/domain/month + $250/user/month.	$80K – $320K
Enterprise	Large enterprises, 4+ domains, custom SLA	Annual contract. Platform fee + domain fee + user fee + success package.	$320K – $2M+
Public Sector	Government, defence, regulatory agencies	Annual contract. Government pricing schedule. Sovereign cloud option.	$120K – $1.2M

Pricing Insight: The Domain Expansion Economy

Adding a domain to an existing Enterprise customer is a 90% gross margin sale. The customer already has the infrastructure, SSO, data model, and RBAC in place. Domain expansion is a pure software licence event. This is why NRR is 312%: every customer is 3x underpenetrated on day one.

6.5 Marketing Strategy

- Category Creation: Qala is defining Universal Solution Lifecycle Management as a new software category. Editorial content, research reports, and industry speaking establish the category before competitors can name it.
- Domain Community Building: Separate community channels for each domain (pharma ops, quant finance, agri-tech). These communities pre-sell Qala through peer credibility without direct promotion.
- Regulatory Radar Newsletter: 12,000 subscribers. Weekly digest of regulatory changes (DORA, FDA, MiFID) with Qala's compliance angle. Converts at 4.2% to trial.
- Enterprise Analyst Relations: Gartner and Forrester briefings in Q2 2025. Target: inclusion in new Market Guide for Universal Lifecycle Governance Platforms by Q4 2025.
- Customer Evidence: Design partner case studies with ROI metrics (AstraZeneca: 94% reduction in audit prep time). These are the most effective sales collateral in regulated industries.

7 Financial Plan & Projections

All projections are based on bottom-up pipeline modelling from 47 identified enterprise opportunities, seed-cohort expansion data (NRR 312%), and industry benchmarks for enterprise SaaS at comparable ARR growth stages.

7.1 Revenue Model

Revenue Stream	Year 1	Year 2	Year 3	Year 4	Year 5
Enterprise Subscription ARR	$6.4M	$18.2M	$42.0M	$78.4M	$131.0M
Mid-Market Subscription ARR	$2.1M	$5.8M	$13.6M	$24.2M	$38.5M
Growth / SMB ARR	$0.4M	$1.2M	$3.8M	$7.1M	$12.0M
Professional Services	$1.1M	$2.4M	$4.8M	$7.2M	$9.8M
Domain Pack Marketplace (net)	$0	$0.4M	$2.1M	$5.8M	$12.4M
Total Revenue	$10.0M	$28.0M	$66.3M	$122.7M	$203.7M
YoY Revenue Growth	—	180%	137%	85%	66%

7.2 Gross Margin Profile

Component	Year 1	Year 3	Year 5	Notes
Software Subscription Gross Margin	74%	81%	86%	Improves as infrastructure becomes more efficient at scale.
Professional Services Gross Margin	22%	35%	42%	Improves as delivery playbooks and partner channel mature.
Blended Gross Margin	68%	77%	84%	Trending toward best-in-class enterprise SaaS (80%+) by Year 4.

7.3 P&L Summary

($M)	Y1 2025	Y2 2026	Y3 2027	Y4 2028	Y5 2029
Total Revenue	$10.0M	$28.0M	$66.3M	$122.7M	$203.7M
Cost of Revenue	$3.2M	$6.7M	$15.3M	$24.5M	$32.6M
Gross Profit	$6.8M	$21.3M	$51.0M	$98.2M	$171.1M
Gross Margin %	68%	76%	77%	80%	84%

R&D (Product & Engineering)	$8.4M	$14.0M	$22.0M	$30.0M	$38.0M
Sales & Marketing	$7.8M	$16.8M	$29.8M	$42.5M	$55.0M
General & Administrative	$3.2M	$5.8M	$9.6M	$14.2M	$18.0M
Total Operating Expenses	$19.4M	$36.6M	$61.4M	$86.7M	$111.0M
EBITDA	($12.6M)	($15.3M)	($10.4M)	$11.5M	$60.1M
EBITDA Margin	(126%)	(55%)	(16%)	9%	30%
Net Cash Burn (annual)	$13.1M	$16.0M	$11.2M	—	—

Path to Profitability: EBITDA positive by Q3 2028

Unit economics improve as: (1) sales efficiency matures post Series A, (2) domain expansion revenue (90% GM) grows as % of ARR, (3) AI Agent reduces customer success headcount requirements per logo, (4) infrastructure costs flatten while ARR grows.

7.5 Cash Flow & Runway

Quarter	Cash In	Cash Out	Net Burn	Cumulative Cash	Runway
Q2 2025 (close)	$28.0M	$3.1M	$3.1M	$29.4M	24+ months
Q3 2025	$2.8M	$4.2M	$1.4M	$28.0M	22 months
Q4 2025	$3.4M	$4.8M	$1.4M	$26.6M	20 months
Q1 2026	$4.2M	$5.5M	$1.3M	$25.3M	18 months
Q2 2026	$5.8M	$5.8M	$0	$25.3M	18 months
Q3 2026 (breakeven on new ARR)	$7.1M	$5.2M	($1.9M surplus)	$27.2M	20+ months

7.6 Funding History

Round	Date	Amount	Lead Investor	Post-money Valuation	Use
Pre-seed	Jan 2023	$1.2M	Operator Angels	$8M	MVP, 2 design partners
Seed	Sep 2023	$9.0M	a16z	$38M	Product, 5 design partners, team
Series A	Q2 2025 (target)	$28.0M	TBD	$113M	Scale product, GTM, international

8 Operations & Execution

8.1 Headcount Plan

Department	Current (Q1 2025)	End 2025	End 2026	End 2027
Engineering & Product	18	32	54	78
Sales	4	12	22	32
Customer Success	3	8	16	24
Marketing	2	5	8	12
General & Administrative	4	8	12	18
Total	31	65	112	164

8.2 Infrastructure & Security

- Cloud Infrastructure: Multi-region AWS deployment (US-East, EU-West, AP-Southeast). Dedicated tenant isolation with per-customer encryption keys.
- Security Certifications: SOC 2 Type II audit underway (completion Q3 2025). ISO 27001 certification target Q2 2026. FedRAMP Moderate (for US public sector) target Q1 2027.
- Data Residency: US, EU (Germany), APAC (Singapore) data residency options. Customer data never leaves chosen region. EU customers subject to GDPR data processor agreements.
- Uptime SLA: 99.9% for Professional tier; 99.99% for Enterprise tier (with financial penalties). Current uptime: 99.97% over last 12 months.
- DR/BCP: RTO < 4 hours, RPO < 1 hour for Tier 1 Enterprise. Continuous backup with point-in-time restore.

8.3 Key Technology Partnerships

Partner	Integration Type	Strategic Value
AWS	Infrastructure (primary cloud)	Preferred pricing, co-sell programme, Marketplace listing Q3 2025.
Microsoft Azure	Infrastructure (secondary, EU)	EU sovereign cloud option. Azure Marketplace listing.
SAP	Bi-directional data integration	SAP ERP as source of truth for CPG/pharma inventory and batch data.
Salesforce	CRM integration + AppExchange	Qala CCR data in SFDC for enterprise customers. AppExchange listing.
ServiceNow	IT change management integration	ITSM change records mapped to Qala CCR for enterprise IT customers.
Veeva	Life sciences data integration	Qala as governance layer above Veeva clinical data (complementary).

SAP Ariba	Procurement integration	Supplier solution data fed into Qala for CPG supply chain traceability.

9 Risk Analysis & Mitigation

9.1 Risk Register

Risk	Probability	Impact	Mitigation
Category Adoption Risk: enterprises may be unwilling to replace established domain tools.	Medium	High	Qala is additive, not replacement. API integrations with existing tools allow phased adoption. Pilot model de-risks first purchase.
Competitive Response: Salesforce, ServiceNow, or Microsoft launches a competing universal platform.	Low-Medium	High	Domain Pack architecture and AI cross-domain moat take 3+ years to replicate. First-mover enterprise contracts include multi-year lock-in.
Domain Complexity Underestimation: regulatory depth in new domains (pharma, financial) exceeds estimates.	Medium	Medium	Domain Pack advisory board for each new domain includes former regulators and industry operators. Domain launch includes 6-month beta with design partners.
Enterprise Sales Cycle Elongation: macroeconomic pressure slows enterprise procurement.	Medium	Medium	Diversified pipeline across 6 industries. Pilot programme allows starting without full procurement cycle. SMB PLG channel provides counter-cyclical revenue.
Key Person Dependency: loss of CTO or CEO would significantly impact execution.	Low	High	Key-man insurance in place. VP Engineering successor development. Comprehensive documentation of technical architecture.
AI Regulatory Risk: EU AI Act or other regulation restricts Qala's AI Agent capabilities in regulated sectors.	Low-Medium	Medium	AI Agent is advisory-only. Human approval required for all governance actions. Architecture designed to be compliant with current and anticipated AI regulation.
Data Security Breach: customer solution data exposure.	Low	Critical	Defense-in-depth security architecture. SOC 2 Type II. Penetration testing quarterly. Bug bounty programme. Breach response plan tested annually.

9.2 Regulatory & Compliance

Qala operates in regulated industries and must maintain the highest standards of its own governance. Current status:

- SOC 2 Type II: Audit in progress. Target completion Q3 2025. Independent auditor: Deloitte.
- GDPR: DPA templates in place for EU data processing. Data residency options available. DPO appointed.
- CCPA: Privacy policy and data subject rights processes compliant. Annual review scheduled.
- ISO 27001: Gap assessment complete. Certification target Q2 2026.

- FDA 21 CFR Part 11: Validation protocol designed for pharmaceutical customers' use of Qala as a validated computerised system. IQ/OQ/PQ documentation package available.

10 Investment Opportunity

10.1 Series A Structure

Term	Detail
Instrument	Preferred Equity (Series A Preferred Stock)
Amount	$28,000,000
Pre-money Valuation	$85,000,000
Post-money Valuation	$113,000,000
Lead Investor	TBD (seeking one lead for $18-20M; remainder from existing investors + strategics)
Existing Investors	a16z and Unusual Ventures participating pro-rata in full
Liquidation	1x non-participating liquidation preference
Board	2 Founders + 1 existing investor + 1 Series A lead + 1 independent
Anti-dilution	Broad-based weighted average
Closing Target	Q2 2025 (June 30, 2025)

10.2 Use of Proceeds Detail

Category	Amount	Deployment Timeline	Measurable Milestones
Product & Engineering	$11.2M (40%)	Months 1-18	Full 14-domain platform GA by Q4 2025 AI Agent v2 release Q1 2026 Mobile app (iOS/Android) Q3 2025 SOC 2 Type II certification Q3 2025
Sales & GTM	$7.0M (25%)	Months 1-18	25 new enterprise logos by end of Series A period 3 signed channel partnerships (SI + tech alliance) $12M ARR by Q4 2026 Sales team: 4 AEs to 14 AEs
International	$4.2M (15%)	Months 6-18	UK office open Q3 2025 Singapore hub Q4 2025 6 international enterprise customers EU data residency GA Q4 2025
Customer Success	$2.8M (10%)	Months 1-18	NRR maintained above 130% Gross churn below 5% CS team: 3 to 12 Customer community 500+ active members
G&A & Reserve	$2.8M (10%)	Months 1-18	Finance systems for Series B readiness Legal: international entity setup

			M&A exploration fund

10.3 Exit Pathways

Exit Path	Probability	Timeline	Indicative Valuation	Comparable
IPO	Primary	2028-2030	12-16x ARR at IPO ARR of $200M+: $2.4-3.2B	Veeva Systems: 18x ARR at IPO; ServiceNow: 14x ARR
Strategic Acquisition	Secondary	2026-2029	8-12x ARR	Salesforce acq. of MuleSoft: 13x ARR; SAP acq. of Qualtrics: 12x ARR
Secondary / PE Recap	Tertiary	2027+	5-8x ARR	Private equity roll-up of enterprise GRC platforms

10.4 Why Invest Now

The Series A is the last entry point before the compounding begins.

The universal platform is built. The category thesis is proven by design partners. The expansion engine (NRR 312%) is running. The pipeline ($23.4M) is qualified. The regulatory tailwinds are permanent.

The Series A funds the scale of an already-working go-to-market motion — not an experiment. This is the moment to invest in the infrastructure layer for governed solution management that every regulated enterprise in the world will eventually require.
